

AMANDA ADD-ONS AND ADDITIONAL SERVICES

Streamline your complete workflow by integrating Amanda with other process management tools.

APPLICATIONS – LaunchIT is experienced integrating Amanda with the following:

Portal

Electronic Plan Review

Inspection

Document Management:
OpenText, Laserfiche,
OnBase, SharePoint

ADDITIONAL SERVICES – Because there's more work to be done than just Amanda implementation and maintenance.

Server Migration

If you want to **reduce** your license cost and **increase** your efficiency, performance, and support, consider moving from an Oracle database to Microsoft SQL Server. Our experience and best practices migrating from **Oracle to SQL** make the process straightforward and smooth.

Encryption

Does your data need to meet a security standard? We've encrypted both Amanda databases and files stored in file systems. Rest assured that you can maintain the confidentiality and the integrity of your information.

BLOB EXTRACTION – With our **BLOB extractor tool** you can stop stretching your database with Amanda attachments. Our tool moves attachments from a database to a file system during an Amanda 6 or 7 upgrades. The tool is flexible and allows users to:

- › Provide login credentials to the database, such as host name, user name, password, port number, etc.
- › Specify the BLOB search by database table and column.
- › Specify the folder path where extracted BLOB files will be saved.
- › Choose whether to delete BLOB files from the database once they have been stored on a file server.
- › Know how long each extraction/conversion took to be completed.

BLOB searches and extractions can be based on the following criteria:

- › Start from the beginning
- › Start from where you previously stopped
- › Start from an attachmentRSN (allows the user to provide a value)
- › Start from a specific STAMPDATE range
- › A specific number of BLOBS (allows the user to provide a value)
